

Understanding and using parental controls to help protect your child online

Using parental controls can help keep children and young people safer online by preventing access to harmful content, managing **screen time**, and who your child communicates with.

Parental controls

- You can set parental controls on all devices, including those your child may access with others such as family and friends. They can be revised and updated regularly.
- Parental controls are most successful when combined with building children's safety skills, using technology together as a family, and providing active oversight.
- Include children in conversations and decisions about rules that affect them. It helps to build trust, and they are more likely to feel like they can come to you if something goes wrong.

Finding the right balance

- Every family is different. Your values and parenting style will help guide the rules and controls that are right for your child.
- If a device or program is shared by multiple members of your family, you may be able to change the tool settings to reflect each user's age and skills.
- If your child is living between homes, try to agree with the other parent or carer on consistent rules or settings, including with grandparents.

Active oversight may reduce the risks of harms

- Regularly look at how your child engages online. This can help you understand how they cope in various situations and their critical thinking skills.
- Troubleshoot problems together and discuss risky features to reduce their level of exposure to negative online experiences.

Children and young people can protect themselves too

- As children develop, they can learn things like keeping personal information private, checking with you before downloading anything and learning how to mute and block.
- When they are older, they can learn to use strong, unique passphrases and ensure they are updating their devices and software regularly.

Set meaningful expectations

Create a [family tech agreement](#) outlining:

- where your child can use devices, such as shared spaces in the home
- when they can use devices, such as after chores and not before bedtime
- what games, apps and websites they are allowed to use
- who they are allowed to talk to or follow online.

Ways children can bypass parental controls

- Children may try to:
 - share files directly between devices without using the internet or needing approval (AirDrop)
 - use in-app browsers – access websites through apps (like games or messaging apps)
 - remove an app with limits then reinstall it to remove restrictions
 - use the web version to bypass the age limit – access apps through a website to get around app age restrictions
 - use updates that can reset settings or reset a device to factory settings which may undo restrictions or parental controls.

Wi-Fi network

- Many routers allow parental controls to be set up across your whole family wi-fi network, however children can use phone data to avoid restrictions.
- Check out the products accredited on the [Family Friendly Filter Scheme](#).

Managing Apple devices

- Set up a [Child Account](#) with [Family Sharing](#).
- Use Family Sharing to monitor the [parent controls](#) across your child's devices, including allowing [apps](#), [approving websites](#), [managing contacts](#), [Siri](#), [screen time](#), [communication safety](#), [content and privacy restrictions](#).
- The Assistive Access feature (go to Settings and then Accessibility) can turn an iPhone into a simpler device with basic functions, limited apps and large icons.

Managing Android devices

- Use [Microsoft Family Safety](#) for Windows PC computers.
- Most [Android devices](#) have parental controls in the 'Settings' app.
- Smartphones, tablets and chrome books can use [Google Family Link](#).
- For self-management tools on Android devices go to 'Settings' and turn on 'Digital Wellbeing'.

Managing AI Assistants

- See [ChatGPT](#) parental controls and [ChatGPT for Teens](#).
- See [Gemini](#) parental controls.

Managing popular apps

- Parental controls for [Spotify](#).
- Parental controls for [WhatsApp](#).
- Parental controls for [Messenger Kids](#).

Other devices

- Parental controls are also available on devices like smart TVs, smart watches, and fitness trackers. To find specific advice, google the name of the device with 'parental controls'.
- Some smart TVs allow you to block tv shows by rating, for example, only displaying **G** or **PG**. You can also impose rating restrictions within some streaming services such as Netflix.
- Go to [The eSafety Guide](#) for more information on parental controls for specific apps, services and platforms.

Gaming controls

- Some game consoles and platforms have parental control settings. You can use them to block certain games, limit time spent playing, turn off in-game purchases, and control who your child can talk to.
- Be aware that mobile and web games rarely have parental controls.
- If you want to change your child's gaming habits, make changes gradually and avoid restricting your child's devices. You can look at our information on [gaming](#), including tips on what to do if something goes wrong online.

Gaming communities

- Online gaming communities are likely to be shared spaces with adults. They may expose a young person to inappropriate content and language. Having open conversations with your child is one of the best ways to ensure they seek help if required.
- Some games allow you to filter or hide certain types of content, block or limit friend requests, manage how much personal information is shared, and turn off chat or communication features. For more information on specific games, access [The eSafety Guide](#) or [Common Sense Media](#) or [Australian Classification](#).

Tips for transitioning from gaming to other activities

- Negotiate online games and offline games using the same strategies, such as how many games or levels are played, rather than just time.
- Select games that match the amount of time they are allowed to play.
- It's best to avoid having your child do something unpleasant right after gaming, like cleaning their room or doing housework.
- End gaming time in a positive way, such as joining in or asking your child to show you what they have been doing.

Smart toys

- Smart toys, from internet enabled education tablets to teddy bears, are items at the top of many children's gift lists. However, it is important to be aware of the risks. For more information, read about [Smart toys](#).
